

I²C GPIO Expander

The PCA9554 is identical to the PCA9534 except for the addition of the internal I/O pull-up resistors, which prevents the ports from floating when configured as inputs. Pull-ups are still used in this design so that the '34 can be used if needed.

The PCA9554 is similar to the PCA9557 except the '54 has an INT pin whereas the '57 has a RST pin. Pinouts are also different.
